## **NEW!** **Updated MPM Motorcycle Line**

As a full-range supplier of automotive oils and fluids, MPM also offers a complete range for motorcycles, scooters and mopeds. Engine technology is developing at a rapid pace; including motorcycle engines. This also requires more oil and fluids to allow these new engines to deliver their optimum performance. Therefore, MPM is proud to present an update of its Motorcycle Line products. With several upgrades and three completely new products, the MPM Motorcycle Line now covers 95% of motorcycle oils.

### **Upgrade 2-stroke mixtures**

The 2-stroke oils meet the most modern requirements for both standard road use and for tough conditions on track and in competition. For 2-stroke scooters, the MPM 43000 product has been upgraded with the JASO FD (Low Smoke) specification, meaning this product meets the strictest environmental requirements. For Off Road, Racing, Cross and Go-Karts, the MPM 43000K and the MPM 43000R have been upgraded with Ester blend technology. This ensures even better lubricating properties at high speeds and optimal engine performance. MPM products have proven themselves several times over in delivering top performance in competitions and championships!

### **Upgrade 4-stroke motor oils**

MPM's 4-stroke motor oils (in the various viscosities) now comply with JASO MA2 and the latest API SN specification, thanks to the new Ester technology, which significantly extends their application range.

### **Upgrade Fork Oils**

MPM offers 4 different viscosities for fork oil, from 5W up to 20W. These have all been upgraded to Premium Synthetic technology for even better damping and stability of the front suspension and therefore better riding conditions.

**In addition, MPM added three new 4-stroke motor oils to its range:**

### **MPM 54000A**

In order to provide 4-stroke motor scooters with CVT transmissions with the OEM-prescribed motor oil, MPM introduced a new product; the MPM 54000A 4-Stroke Motorcycle Oil 10W-30 Semi Synthetic MB with the JASO MB and API SJ specifications. ▶

### **MPM 54000S**

The new MPM 54000S 4-stroke Motorcycle Oil 10W-50 Premium Synthetic complements the existing MPM Motor Line with the API SN and JASO MA2 specification. This advanced motor oil is particularly suitable for Japanese engines made since 2015. ▶

### **MPM 58000**

For sportive use on the street, track and off-road, the new MPM 58000 4-Stroke Motorcycle Oil 10W-60 Premium Synthetic Ester Racing has been added to the range. Specially developed for extreme temperatures and harsh conditions, this new product features the latest technology and specifications: API SN; JASO MA2. This motor oil is particularly suitable for Italian motorcycles and scooters, such as Ducati, MV Agusta and Aprilia. ▶

With this new portfolio, MPM offers you a complete range to maintain your motorcycle, scooter or moped according to OEM requirements.
