NEW! MPM 05000ECB Motor Oil 0W-20 Premium Synthetic EcoBlue

Engines are becoming more and more efficient in order to meet the increasingly stringent CO₂ emission requirements. Using the right motor oil plays a crucial role in this respect. After all, the right motor oil limits undesirable friction so that significant fuel savings can be achieved.

When developing engines, car manufacturers are continuously looking for the best ratio between fuel savings and protection against wear and tear. This optimal performance can be achieved not only by the design of the engine, but also by using motor oil with specific properties. As such, motor oil is an essential component of the overall engine construction.

Specifically for its new 1.5-liter diesel engines, car manufacturer Ford has introduced a new motor oil with a unique specification: Ford WSS-M2C952-A1.

This new specification has been specially developed for the new EcoBlue TDCI engines and is not backward compatible. The new motor oil provides optimal protection of the engine against wear and tear, while at the same time minimizing fuel consumption, resulting in reduced environmental impact.

With these new developments in mind, MPM introduces its new product 05000ECB. This newcomer to the MPM range satisfies the important new Ford WSS-M2C952-A1 specification, which is found in, among others, the 1.5-liter diesel engines of the Focus, Kuga, Puma, EcoSport and Tourneo/Transit Connect models. For the exact applications of 05000ECB, please refer to mpmoil.com.

In addition to the Ford models listed above, this motor oil can also be used for brands and models where a SAE 0W-20 with ACEA C5 or C6 specification is recommended.

Specifications:

- ★ ACEA C5, C6
- ★ API SP/SN Plus
- ★ Ford WSS-M2C952-A1
- ★ Jaguar/Land Rover STJL.03.5006
- ★ Opel/GM dexos™D
- ★ ILSAC GF-6A
